The ISIT 2011 Student Paper Award winners are

- A. Ingber, for the paper "The Dispersion of Infinite Constellations" co-authored with R. Zamir and M. Feder
- Y. Wu, for the paper "Degrees of Freedom of the Interference Channel: A General Formula", co-authored with S. Shamai and S. Verdú
- L. Zhang, for the paper "Capacity of Gaussian Channels with Duty Cycle and Power Constraints", co-authored with D. Guo

The paper presentations were attended by members of the committee.

The committee deliberated at ISIT and afterwards in order to be able to consider the papers fully.

We had an original four papers proposed, but winnowed them down to three to abide by the bylaws.

I am very thankful to the committee – they did a very thorough job.
Looking to next year

- Consider how to manage the different paper committees to balance load
- Bylaw clean-up around changing deadlines for joint IT/ComSoc
- Look at issues of confidentiality and CoI management (See Frank’s inputs)
- Proposed locations for BoG meetings:
  - ITA (UCSD)
  - ISIT (MIT)
  - ITW (EPFL).
